Data Scientist

Dear Blockchain, Inc.,

I am in my first year of graduate studies at Johns Hopkins University's Whiting School of Engineering for a Masters of Science Degree in Data Science. During my undergraduate studies at Humboldt State University I discovered a love for statistics while being able to actively apply it to my research in psychology. My unique background in Psychology, Computer Science, and Statistics allows me to understand the people within my analysis and create realistic stories that everyone can relate too.

Currently I am looking for new career opportunities in the data science field as a way to challenge myself and apply my skills. I am skilled in data analysis tools such as Tableau, SPSS, and Excel, while able to proficiently code in R, Python, Java, SQL, and JavaScript. I am able to elegantly display and create presentations from data using RMarkdown, D3.js, and LaTeX.

Despite having my bachelors of arts in Psychology, my undergraduate studies were quite rigorous. My minor in Applied Mathematics gave me the background I need for understanding advanced concepts by studying topics such as linear algebra, multivariate calculus, and probability theory. My second minor in Applied Statistics gave me the skills needed to analyze data and make educated inferences, thanks to courses in Regression/ANOVA, Multivariate Statistics, and Modern Statistical Modeling. Coupled with my Psychology courses in Research Methodologies and Psychological Tests and Measurements, I was able to learn how to collect, wrangle, analyze, and present data.

I am excited to start a new career in Data Science, and would love to start putting my skills and abilities to work. With an organized mind, I am the kind of hard working person who enjoys tackling problems and finding new methods to solve them.

E-mail and Cell Phone are the best ways to get in contact with me. I am available for phone or video conversations any-day, and for in-person interviews within Northern California. I am free to start working, and look forward to meeting you.

Sincerely,
